

Defining Space

Garden edging is an easy and effective way of enhancing an overall landscape design.

Ironwood rolled garden edging is simple to install and adds definition to the shape of garden beds and the overall impact of landscape design. In addition it provides an excellent barrier against which to "whipper-snip" lawn edges, rather than having to trim lawn edges with great precision.

You can also use Ironwood sleepers or rounds to create stylish garden bed edges and pathways. Ironwood can either be left to weather naturally, or as pictured here, it can be painted to complement or contrast your plant choices.

*guaranteed
to last*

Ironwood Outdoor Plantation Pine comes with a written warranty so it is guaranteed to last.

Ironwood is guaranteed to withstand termites and fungus for 40 years*. Ask your local distributor for a copy of the Ironwood warranty brochure which includes tips on working with Ironwood as well as recommendations for storage, safety and finishes.

* Conditions apply

outdoor living

Ironwood Outdoor Plantation Pine is the best building material to use for outdoor projects.

If you're considering improving your garden with a new fence or garden wall, then this brochure has just what you need: inspiration!

Ironwood is manufactured from 100% plantation pine, the best choice for the environment. Ironwood is strong, versatile and durable - perfect for your outdoor landscaping needs. It is lightweight and easy to cut, paint or stain.

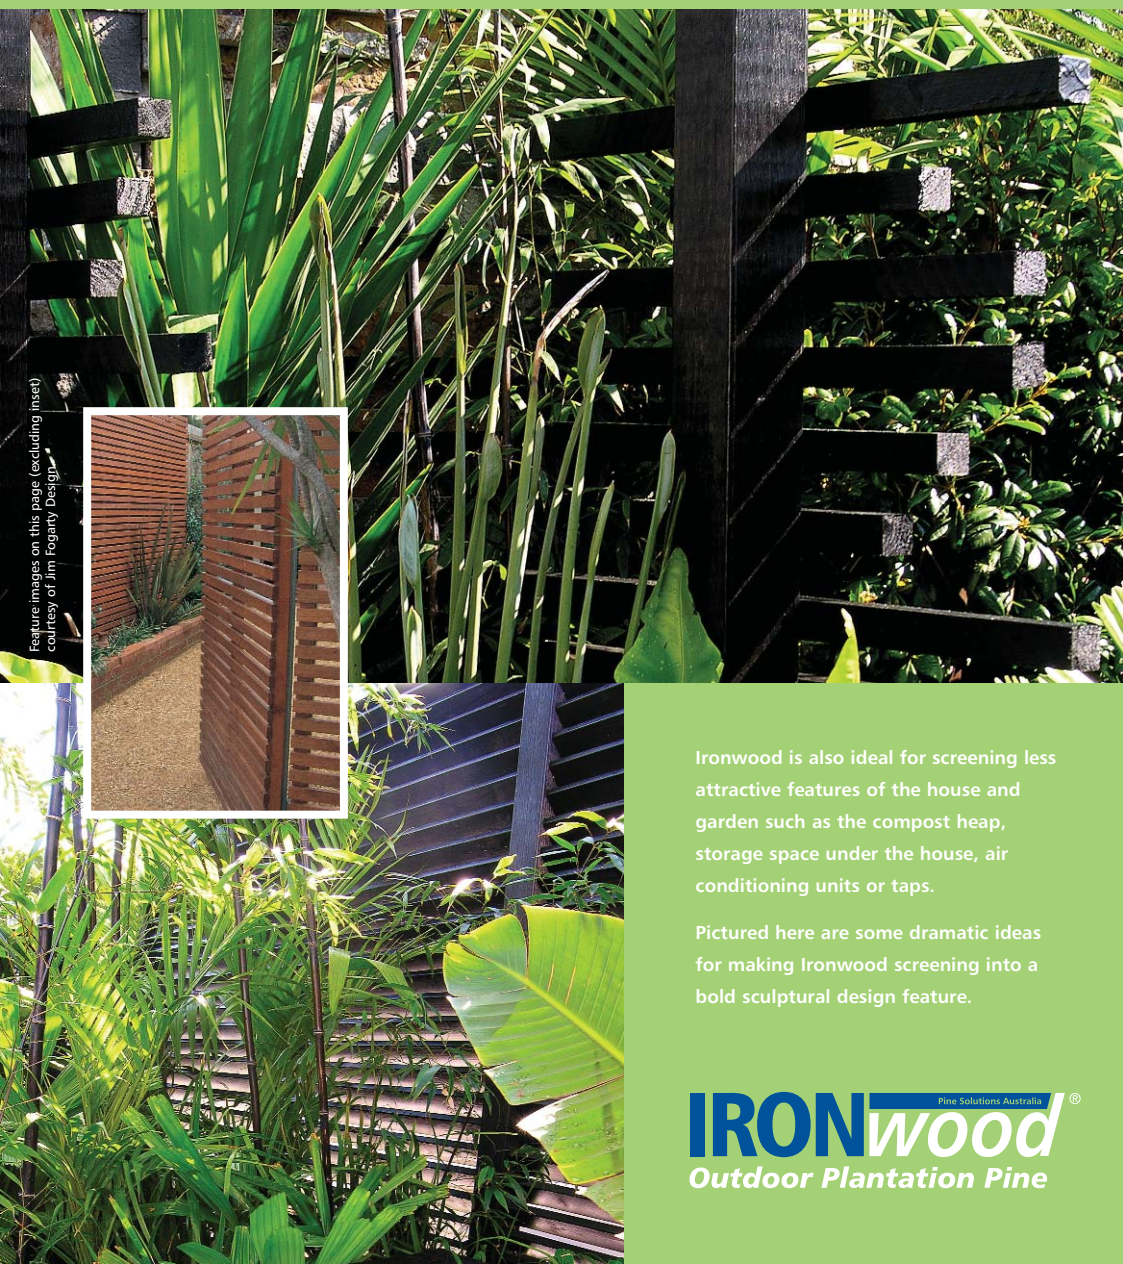

Ironwood landscaping logs and sleepers offer the natural beauty of timber, complementing Australia's rugged environment and blending perfectly into gardens and landscapes right across the country.

easy on the eye

Create a fantastic screening solution to enhance your outdoor living area.

Looking for a privacy solution for your outdoor living space? Install a horizontal slat or louvre screen made from Ironwood Outdoor Plantation Pine. A privacy screen will help create a visual barrier between you and your neighbours.

You can create large screening panels by nailing lengths of Ironwood to a frame, as pictured below (inset). This looks fantastic as a backdrop for bold feature plants such as Bird of Paradise or Yuccas.

Feature images on this page (excluding inset) courtesy of Jim Fogarty Design

Ironwood is also ideal for screening less attractive features of the house and garden such as the compost heap, storage space under the house, air conditioning units or taps.

Pictured here are some dramatic ideas for making Ironwood screening into a bold sculptural design feature.

fence feature

The Ironwood fencing range includes a number of products from Federation-style "acorn" pickets to standard palings.

Lap and cap fencing is an excellent option for a boundary fence. Capping gives your fence a professional finish while protecting the exposed edges of posts and palings. Lapping the palings makes for a very sturdy fence that is also an effective sound barrier.

To avoid disputes, it is recommended that you consult your neighbour and agree on the style and cost before building a fence on a shared boundary. It is best to make this agreement in writing.

For a free design and quote on your fencing project, ask your local Ironwood Distributor about Design Solutions®, the computerised design and quoting system.

round + round the garden

If you are a do-it-yourselfer, pick up a copy of the Ironwood DIY step-by-step garden wall construction guide from your local Ironwood distributor. Alternatively, your Ironwood distributor or local hardware store should be able to recommend a good builder to construct your Ironwood garden wall.

Always remember to dial 1100 to check for underground utilities before undertaking any digging or excavation on your property. Construction of garden walls may need council approval so check with your local authority before you start.

Garden walls are the perfect way to make your garden beds a design feature.

Garden walls are a functional landscaping element that can make the most of a steep garden by creating several levels. They are also very useful for building up the level of garden beds when the soil at ground level is of poor quality.

Ironwood sleepers are precision machined ensuring a consistent finish and they are manufactured to withstand contact with the ground which means they won't rot or decay. Be sure to use galvanised nails and fittings when working with Ironwood products to avoid corrosion.
