IRONwood®

IRONwood decking delivers natural beauty,
a superior finish and long-term durability

The natural solution for you.

 **CarterHoltHarvey**
Woodproducts Australia

IRONwood® decking is the ideal choice for your next decking project – offering good looks, cost effectiveness and environmentally sustainable manufacture.

Good looks without the price tag

IRONwood decking is made in Australia by Carter Holt Harvey Woodproducts and undergoes several different quality processes to ensure good looking, high quality decking boards without the hefty price of many of the alternatives.

Versatile

IRONwood decking is easy to work with. It can be cut using a conventional hand or electric saws and doesn't need any specialist fixings. It is lightweight and thus easy to handle and can be painted or stained to match any colour scheme. Decking boards can also be used to build effective screening in your garden.

Natural underfoot

Enjoy the natural feeling of timber. Timber decking absorbs significantly less heat than masonry or composite products making it much cooler under foot.

Wide range

IRONwood decking is available in two sectional sizes - 70x22mm and 90x22mm and in a range of lengths (2.4m to 5.4m).

Installation and handling information

Which side up?

IRONwood decking comes with one smooth side and one reeded side. We recommend installing the smooth side up so that rain runs off easily, prolonging the life of the deck and making it easy to keep clean.

Finishes

Your deck can be painted, stained or saturated with a clear decking oil to prolong its life and protect against weathering which can cause checking and cracking.

We recommend all surfaces are coated with one application of finish before assembly to ensure complete coverage. Additional coats can be applied to the finished project as required.

Environmentally sustainable choice

The mark of responsible forestry
FSC

© 1996 Forest Stewardship Council

IRONwood decking is made from renewable Australian plantation pine grown in accordance with recognised environmental standards including FSC. We offer FSC COC certified products upon request.

Fixings

All screws, nails and other fixings in contact with IRONwood decking should be hot dipped galvanised.

Treatment

IRONwood decking is treated with Copper Azole to a H3 level in accordance with Australian Standards.

Safety

We recommend following the safety and handling guidelines in the table below.

Further information

For more detailed information on our IRONwood range or any other Carter Holt Harvey products visit www.chhwoodproducts.com.au

Do not burn treated pine

Always wear dust mask and goggles when working with timber

Always wear gloves when working with timber

Dispose of waste in an approved landfill
