Changes to timber standards and the BCA

In June 2010, Standards Australia published a revision of **AS1720.1**: Timber Structures – Part 1: Design Methods, which included changes to the structural design properties of MGP grades of structural timber. A revision of Parts 2, 3 & 4 of **AS1684**: Residential Timber Framed Construction was also published, with the member span tables reflecting the changes to these MGP grade design properties.

The revised Standards above are now referenced under BCA 2011 (released May 2011).

All structural timber produced by Carter Holt Harvey Wood Products Australia since June 2010 has been graded to meet the structural requirements of the revised standards.
