STEP-BY-STEP INSTRUCTIONS

- STEP 1. Screw base boards to internal frame, positioning internal frame piece 19mm from end and sides. Glue all joints.
- STEP 2. Turn base over and position lower side boards. Screw through base into side boards and turn upright.
- STEP 3. Screw internal frame uprights in place 19mm from end of sides ,screwing from the inside of frame.
- STEP 4. Attach top side boards, screwing from inside of frame.
- STEP 5. Attach end boards, screwing into frame from outside.
- STEP 6. Cut skirt corners to 45 degrees in mitre box to fit box and attach with 30mm nails.
- STEP 7. Cut cornice to fit each corner and attach with 16mm nails.
- STEP 8. Join lid pieces with lid joiner, positioning so that lid will close. Route edges if desired.
- STEP 9. Attach hinges as per manufacturer's instructions.
- STEP 10. Countersink screws and nails and fill with woodfill putty, sand smooth and apply your choice of timber finishes.

Safety warning: Inhalation of dust generated from processing Stylewood may cause irritation and sensitisation by inhalation (asthma) and by skin contact (dermatitis). Repeated inhalation of wood dust increases the risk of nasal cavity cancer and of lung fibrosis (scarring). Do not breathe dust, wear a respirator if using power tools. Phone 132 321 for a Material Safety Data Sheet.
